RE: Field Inspection, Shivwits Gypsum Project, S/053/008,
Washington County, Utah

On June 14, 1989, Wayne Hedberg visited the site of the Shivwits Gypsum small mining operation. The intent of the inspection was to observe current status of mine development.

Upon examination of the properties it became apparent that there has been no further surface disturbance or removal of ore from this mine site since our last December 1, 1988 field inspection.

No significant environmental problems were noted during this site inspection. No onsite erosion was noted, although some had been anticipated in the obstructed small ephemeral drainage immediately adjacent (northeast) of the quarry pad area. On site surface disturbance was visually estimated at approximately 1/2 to 3/4 (not including the access road) acres.
